

# Blog: Content Feed Module

This guide will show you how to add Articles in the Content Feed module:

Click on the top navbar and hover over **Content Feed > Articles**

This section is for the purpose to create blogs/updates of the website and the things you might have added such as new products, maybe a new store opening.

- **Articles category examples:** Latest News, New Products, Testimonials etc.

To select an article you want, please choose **Edit** or **Add a new Article**.

The green arrow shows which article has been selected, if an article is turned **Off** it will be in light grey text.

If you click **Edit**, you will then get a page like this.

This page is where you add text, headline, sub header, you can also create categories, such as latest news or testimonials. It is a very advanced on the things you can add such as adding meta key words for SEO. You can just remove and add text as it looks, no need to code. Once you are finished you can press **Update**.

**Templates**

The section will display the structure of your articles. Please use screenshot example to match your articles.

**Categories**

The category section is a nice way to separate your articles into folders. Just press **Add a new category**, once added if you go back to the article, you will be able to then pick which category you wish for this to be placed in, such as if you had a testimonial folder, you could assign articles to that category.

**Tags**

Simply put, a blog tag is a word that describes a blog post. They are an easy way to attach “labels” to your content & link similar articles together.

**Meta Information**

This is the section where you can add snippets of text that describe a page's content.
