

PCI Compliance

INDUSTRY STANDARD TECHNOLOGIES

ESTORE is built on industry standard technologies.

SAFE AND SECURE

ESTORE is now a PCI Compliant service provider.

PCI standards were created to ensure that retailers have greater control over sensitive credit card information in their possession and take steps to prevent data theft and fraud.

There are several advantages to becoming PCI compliant:

- It protects residents' card data and reduces the risk of a data breach.
- It helps prepare agencies to detect and prevent both physical and network based attacks.
- It boosts residents' confidence with using card payments for agency fees.
