

Safe & Secure

As part of our annual website CMS penetration test, we're pleased to confirm that our eCommerce site successfully passed all key security checks.

Following the assessment, we reviewed several measures to further strengthen site security, including:

- Secure CMS and server updates
- PCI-compliant payment processing
- Full-site HTTPS encryption
- Strong access controls
- Ongoing security monitoring

In addition, the website is scanned and monitored via our Microsoft Azure server, protected by advanced firewalls and IP blocking to prevent unauthorised access.

We also encourage all users to support these efforts by:

- Updating passwords regularly
- Being cautious with spam or phishing emails

Together, these steps help ensure ongoing protection and compliance for your site.
